

VERMILION

## Project Manager, Business Analyst

**Recruiter:** Vermilion Software Ltd  
**Location:** London, South East England  
**Salary:** £55,000 - £62,500 per annum  
**Sector:** IT  
**Job Type:** Permanent

As part of our continued drive to maintain service excellence through our VRS product development and product implementations at customer sites globally, Vermilion is constantly looking for highly motivated, diligent and skilled technicians to complement our product implementation teams and to take lead roles within a rapidly growing new and exciting software company.

Candidates should have an enthusiastic, positive and professional attitude and should not be averse to working overseas (US and Europe) when the need arises.

Candidates should desire to work both on the technical product side as well as improving their asset management business skills, required to successfully fulfil their roles. Candidates should also not be averse to the idea of extended project hours to some degree.

Candidates will require the following skills:

- Good man management
- Solid analysis experience
- A thorough understanding of the client side environment gained through a minimum of 5 years experience preferably in the fund management industry
- A good knowledge of back-office processes
- Client reporting or performance department experience would be highly advantageous
- Full project life cycle
- Report production in terms of build, extract and usage points of view
- Data warehousing projects, understanding the extraction of datasets from a system environment
- Data analysis
- Data cleansing
- Data mapping
- Package selection and implementation.

Candidates should also have good MS office and MS project skills.

Product implementation projects will follow successful bids. Implementations will depend on the customer opportunity size and resourcing requirements, but will consist of a number of VRS technologists that will install and customise the VRS product. Implementations could run from one month through to 12 months or beyond.

As well as the normal roles a project manager business analyst is expected to cover, they will also be responsible for the overall quality control of implementations and should perform quality assurance testing to ensure that the work is right.

Candidates should have some technical experience in their past in order to communicate successfully to both client business and technical groups as well as their own Vermilion technical/implementation team. Spoken and written communication skills must be of top quality.

Candidates should also have a good eye for detail when it comes to reports and strong desktop toolset skills (Word, Excel, PowerPoint and MS Project Scheduling).

Candidates should have Prince2 foundation qualifications and practical experience in using it.

### **About Vermilion Software**

Vermilion Software is a leading international provider of client reporting software and services to investment managers in the global institutional asset management, retail and mutual fund, banking, pension, hedge fund, wealth management and insurance industries.
